a cost of $N(\mathbf{q})$, $\mathbf{q} \in T^n$
one MMFF relaxation (decane)
measured
$\propto n\,2^n$
μs per point (value + gradient)
number of torsions n
b gradient components uncorrelated
$\max_{i \neq j}|\mathrm{corr}(\partial_i N, \partial_j N)|$
$3/\sqrt{N_s}$ sampling band
number of torsions n
c $\mathrm{corr}(\partial_i N, \partial_j N)$, $n = 6$
